It may not be possible to place implants in certain positions due to factors such as insufficient bone or proximity to nerve canals. Usually with these cases bone augmentation can be carried out in conjunction with implant surgery.

Every patient that you refer to our clinic will receive a pre-consultation information pack that will help your patient to understand the nature of the proposed treatment and give them a broad idea of the anticipated costs. Once they have received this pack, they should telephone the clinic so that a suitable consultation appointment can be arranged.

Study Models and Radiographs

It would be most helpful if you could send any available information, such as models and radiographs, to us in advance or with the patient for their consultation with us. We will ensure that they are returned to you.

If you have any queries then please do not hesitate to contact us:
